Vulnérabilités détectées

Sévérité	Règle	OWASP	CWE	Message	Fichier / Ligne
ERROR	run-shell-injection	A01:2017 - Injection	CWE-78	Using variable interpolation `\${...}` with `github` context data in a `run:` step could allow an attacker to inject their own code into the runner. This would allow them to steal secrets and code. `github` context data can have arbitrary user input and should be treated as untrusted. Instead, use an intermediate environment variable with `env:` to store the data and use the environment variable in the `run:` script. Be sure to use double-quotes the environment variable, like this: "\$ENVVAR".	.github/workflows/vulnerable-pipeline.yml L.52
